

ABSTRACT OF THE DISCLOSURE

A storage rack connectable to a mounting structure of a vehicle for supporting a load, comprising a load supporting structure, a bracket assembly, and a lift assembly. The load supporting structure is adapted to support the load when the load is associated with the load supporting structure. The bracket assembly is connected to the load supporting structure, the bracket assembly being attachable to the mounting structure. The lift assembly is associated with the load supporting structure for facilitating lifting of the load to the load supporting structure whereby the load can be supported by the load supporting structure and thus the vehicle when the bracket assembly connects the load supporting structure to the mounting structure of the vehicle.
